1. INTRODUCTION:

The ICAR headed by Director General and Secretary, undertakes research in the fields of agriculture, horticulture and animal husbandry and Fisheries. The Department of Agriculture, Cooperation and Farmers Welfare and Animal Husbandry, Dairying & Fisheries headed by Secretaries dealwith the development work of Agricultural and Horticultural crops and Animal Husbandry and Fisheries respectively. The Department of Agriculture, Cooperation & Farmers Welfare is organised in to 27 Divisions including Crops Division. Directorate of Cotton Development comes under administrative control of Crops Division. This Division has 7 more Crop Development Directorates (CDDs) namely i) Directorate of Millets Development, Jaipur, ii) Directorate of Wheat Development, Ghaziabad, iii) Directorate of Sugarcane Development, Lucknow, iv) Directorate of Rice Development, Patna, v) Directorate of Jute Development, Kolkata, vi) Directorate of Oilseeds Development, Hyderabad, and vii) Directorate of Pulses Development, Bhopal. Each Directorate is headed by its Director at National level.

1.2. When the British Rulers in India formed Ministry of Agriculture for the first time in the beginning of the 19th Century, cotton was one of their main considerations, because the Mills in Britain depend mainly on raw cotton produced in India. With the establishment of Agricultural Departments in various provinces of India in 1904, the setting up of Indian Cotton Committee (ICC) in 1917 at Bombay further boosted the spread of *hirsutum* & long staple cotton in India.

1.3. This committee established Indian Central Cotton Committee (ICCC) in 1921 as technical advisory Body to the Government for promoting Agricultural & Technological Research in cotton. The ICCC became a statutory Body in 1923 and established Central Technological Research Laboratory (CTRL) in 1924 at Bombay, presently known as Central Institute for Research on Cotton Technology (CIRCOT). Since 1924 to 1966, ICCC had formulated many cotton schemes with a view to improve cotton quantitatively & qualitatively and operated various developmental schemes for overall development of four cultivated species of cotton in India. The concentrated efforts of the ICCC could cross double the production during 1966. The major activities of ICCC were Breeding- varietal improvement, Seed multiplication, Cotton agronomy, Control of insect pests & diseases and Cotton physiology.

1.4. The Indian Central Cotton Committee (ICCC) renamed as Directorate of Cotton Development in 1966 which was functioning since 1921 at Indian Mercantile Chambers, 14, R.K. Marg, Ballard Estate, Mumbai 400001 up to 30.09.2014, has now been shifted to Nagpur and this Directorate has been functioning since 01.10.2014 at Bhoomi Sarvekshan Bhavan, Katol Road, Nagpur 440013, Maharashtra.

11. NODAL CROP COTTON AND ITS DEVELOPMENT PROGRAMME.

11.1. As on today, 50 species of cotton have been identified in the World, out of which four species are commercially grown by more than 80 countries. India is the only country in the world, which grows all the four species of cultivated cotton i.e. *Gossypium arboreum* and *G. herbaceum*, *G. hirsutum* and *G. barbadense*, besides intra & interspecific hybrids / Bt hybrid cotton. The salient features of these species are as follows:

A. Deshi Cotton:

Picture 1

Picture 2

1. **Botanical Name: *Gossypium arboreum***	1. **Botanical Name: *Gossypium herbaceum***
2. Area under cultivation: About 1.40 % of total cultivated area.	2. Area under cultivation: About 0.60 % of total cultivated area.
3. States cultivating this cotton: Punjab, Haryana, Rajasthan, Uttar Pradesh, Madhya Pradesh, Maharashtra, Gujarat & Karnataka (Kharif Season).	3. States cultivating this cotton: Gujarat (Kharif) & Karnataka (Rabi). 4. Species is also called medical cotton or surgical cotton.

- Both species i.e. *G.arboreum* & *G. herbaceum* are also called Natural Bt cotton / Diploid cotton / Oldworld cotton / Asiatic cotton.
- Cotton seeds of both the species contain oil in the range of 14-20 %.

B. American Cotton

C) Egyptian cotton

Picture 4

1. **Botanical Name:** *Gossypium hirsutum* 2. This cotton is also called American cotton / Tetraploid cotton / Upland cotton / New world cotton. 3. Area under cultivation: About 97.75 % of total cultivated area. 4. States cultivating: All major cotton producing states. 5. This species attracts more pests as compared to Deshi cottons.	1.**Botanical Name:** *Gossypium barbadense* 2. This cotton is also called Giza cotton / Quality cotton / Tetraploid cotton / Egyptian cotton / Sealand cotton / Peruvian cotton / Tanguish cotton / New world cotton. 3. Area under cultivation: About 0.25 % of total cultivated area. 4. States cultivating: Some area in Tamil Nadu. 5. Highly susceptible to insect pests & diseases and yield is also very low compared to other cultivated species.

- Seeds of both the species contain oil in the range of 18-20 %.

11.2. Why cotton is important?

- Provides raw material to Textile Industry

- Provides employment to: i) 6-6.5 Million farmers involved in cultivation, ii) About 60 Million people dependent in Textile Industry for their livelihood.

- Earns huge foreign exchange by exports of Textiles and clothing products

- Multifaceted use: Different kind of Cloths, Cottonoil, Cottonseed Cake, Particle Boards from Cotton Stalk, Pulpsheet made from Bleached Linters, Pellets from Cotton Stalk, Biogas from Willow Dust, Mushrooms on Cotton Stalks, Ceiling and Wall panel, Greeting Cards from Cotton Linter Pulp, Corrugated Boxes for Fruit Packaging, Cotton Stalk Briquettes, Bio-enriched hulls for use in livestock feed.

- Cotton and its by products are bio degradable

11.3. The details of area, production & yield in India vis a vis World, are given in the table below: Area: Lakh Ha, Production: Lakh bales and Productivity: Kg / Ha

11.4. In India, cotton is grown across the country by more than 20 states. Most of the cotton production is contributed by 10 states i.e. Punjab, Haryana & Rajasthan in North zone, Madhya Pradesh, Maharashtra & Gujarat in Central zone and Telangana, Andhra Pradesh, Tamil Nadu and Karnataka in southern zone.

11.5. To supplement the efforts of the state Governments towards accelerating the production and productivity of cotton in the past, the Union Ministry of Agriculture and Farmers Welfare implemented the Intensive Cotton District Programme (ICDP) from 1971-72 to 1978-79, Intensive Cotton Development Programme (ICDP) from 1979-80 to 1998-99 and Technology Mission on Cotton (TMC): Mini Mission II from 1999-2000 to 2013-14. Mini Mission II of TMC was merged with Centrally Sponsored National Food Security (NFSM). The Centrally Sponsored National Food Security Mission: Commercial Crops: Cotton is under implementation from 2014-15 in 15 states i.e. Punjab, Haryana, Rajasthan, Uttar Pradesh, Madhya Pradesh, Gujarat, Maharashtra, Orissa, Tamil Nadu, Telangana, Andhra Pradesh, Karnataka, West Bengal, Tripura & Assam. Under the Scheme, thrust has been given on transfer of technology through Frontline demonstrations in order to extend benefits to the farmers. From 2015-16, the cost of implementation of NFSM: CC: Cotton is being shared between Government of India & State Governments on 60:40 basis for general category states and 90:10 basis for North East & hilly states, but the Central Agencies are funded 100% by GOI. The component wise pattern of Assistance under NFSM: CC: Cotton is given in the table:

Character	**Tolerance / Resistance observed**	**Undesirable traits association.**
Hairiness	Jassids	Susceptible to Bollworms and Mites.
Bud Gossypol	Bollworms, hoppers and fusarium.	-
Frego Bracts	Bollworms, Boll weevil, Bollrot	Fewer and smaller bolls.
Okra leaf	Boll worms, Jassids	Less productivity.
Glabrous	Aphids, Mites	Susceptible to Jassids
Red Plant body	Bollworms	General weakness in vigour, less production.

12.4.Month of August for North, Central and South zones:

- Application of 50% fertilizers first fortnight of August for deshi cotton.
- Weeding is continue if weed growth is appeared.
- Farmers are advised to visit the fields on regular basis to monitor the pest and disease.
- Farmers are advised to remain aware in continuous rain then 15-20 days dryspell, high humidity, cloudy weather is favourable for disease and pest appearance.
- Drain out the excess water if the field is water stagnation. Wilting due to excess water drenching the soil with the help of Cobalt Chloride @10 gm / litre of water.
- Avoid the spraying of minor pest.
- Spray the pesticide against the sucking pest viz Aphids, Jassids, Thrips on the basis of ETL. If the infestation of the above pest is high, spray the Dimethoat 30% E.C @ 1 ml / litre of water, Methyl Demeton 25% E.C 8 ml / 10 litre of water. Spraying of Spinosad 45% E.C @ 0.01% and Carbaryl 50 % WP@ 4 gm/ litre of water particularly for Spotted and American Bollworm. For whitefly spraying of Methyl demeton 20% EC @ 4 ml / litre of water, Dimethoate 30% EC @ 33 ml /10 litre of water.
- In North zone, the cotton remains in peak boll development stage.

12.5.Month of September for North, Central and South zones:

- Continuous cloudy weather and rain over the week may increase the sucking pest, bacterial blight disease.
- Spray of micronutrients, MgSo4, 2% urea followed by 2% DAP to ensure the proper *CRY 1 AC* gene activity in Bt hybrids.
- Farmers are advised not to spray the mixture of Neonicotinoid, Pyrethroids and Fipronin as it aggravate the whitefly infestation.
- Place the pheromone trap in the field 5 Nos. per ha for monitoring the pink bollworm.
- Foliar spray of any of the one pesticides Acetamiprid 20 SP @ 0.4ml / litre of water, Thiochloprid 1 ml / litre of water, Thiomithoxam 25WG @ 0.5ml / litre of water for whitefly.

12. ADVISORY FOR BETTER COTTON PRODUCTION

- To control the spotted bollworm foliar spray of Fenvalarate 20EC @ 1ml / litre of water, Deltamethrin 2.8 EC @ 1 ml / litre of water, Quinalphos 25EC @ 2 ml / litre of water.
- Picking starts in north zone.

12.6.Month of October for North, Central and South zones:

- In general cotton crop remains in maturity and picking stages in North Zone.
- Farmers are advised to ensure clean and neat picking to maintain the good quality of produce.
- Farmers are advised not to irrigate the field after 1/3 opening of the bolls.
- Avoid the picking of rotted bolls.
- Dry the kapas before storage.
- Irrigate the field if the plant suffer moisture stress.
- Intercultural operations carried out, if needed.
- Foliar application of micronutrient 0.2% MgSo4, 2% KNO3 should be done at boll development stage.
- Spray of Bavistin 1 gm / litre of water or 80% sulphur @ 25gm/10 litre of water is applied against the grey mildew.

- If the pink bollworm exceeds 24 per trap after three days taken up one spray of any Synthetic Pyrithroid.
- Insecticide spray in December may be taken up only in the field having at least 8-10 green boll per plant, generally in irrigated cotton.
- Insecticide spray must be done to protect green bolls only after picking full open bolls.
- Synthetic Pyrithroid spray should be restricted to one or two spray, so as to avoid pest resurgence of whitefly and American bollworm.
- In south zone few areas are in peak flowering and boll development stages. For late sown crop, earthing up and top dressing with Nitrogen and Potassium are recommended. To manage the broad leave weeds in the late sown crop, post emergence application of Pyrithiocab Sodium 10% SC @ 62.5g / ha and manage grass weeds application of Quizlofop- O ethl 5% @ 50 g / ha are recommended.

12.9. Month of January for Central and South zones:

- Farmers are advised to terminate the crop in January.
- Avoid prolonging of crop through irrigation and fertilizer as late formed bolls may be severely attacked by pink bollworm incidence.
- Avoid ratooning of summer cotton.
- Avoid the gunny bags to prevent contaminating the cotton.
- Do not store cotton stalks, residues and infested seed cotton.
- If seeds are infested, this may be destroyed immediately.
- Promote removal and destruction of cotton stubbles to prevent the next year infestation.

12.9. Months of February and March for Central and South zones:

- Undertake deep summer ploughing.
